- JUNIOR SOFTWARE DEVELOPER -

Junior Software Developer with a Software Engineering Bootcamp background and hands-on experience building full-stack web applications using Python, Django, Django REST Framework, JavaScript, and React. Completed a 6-month software engineering bootcamp with a 98% average, followed by continued self-directed development focused on modern frontend and backend architecture. Experienced in building REST APIs, authentication systems, e-commerce functionality, database-driven applications, and responsive user interfaces.

- EXPERIENCE -

Independent Software Development (09/2025 - Present)

- Continued developing software independently after completing the bootcamp, self-teaching **JavaScript**, **React**, **Vite**, and modern frontend development through practical application development.
- Re-engineered a Django e-commerce application into a full-stack architecture using **Django REST Framework, React, and Vite**, implementing REST APIs and a modern responsive frontend.
- Developed and deployed independent React applications using reusable components, React Router, UI libraries, responsive layouts, interactive forms, and modern CSS.
- Designed the new Swift Basket frontend and created UI/UX layouts using **Canva**.

HyperionDev, Software Engineering Bootcamp (02/2025 - 08/2025)

- Completed an intensive 6-month Software Engineering Bootcamp focused on Python, Django, SQL, REST APIs, software engineering principles, and practical application development.
- Achieved an overall average of **98%** across bootcamp tasks and projects.
- Gained hands-on experience with Django, REST APIs, Docker, SQL/SQLite, MongoDB, Git, and software development workflows.
- Completed five practical software development projects, including a Django e-commerce application and Django news platform.

- PROJECTS -

Swift Basket – Full-Stack E-commerce Application (Python, Django, React)

- Re-engineered the original Django application into a full-stack architecture using Django REST Framework, React, and Vite.
- Implemented authentication and role-based access for buyers, vendors, and administrators, with backend validation for products, inventory, and store ownership.
- Implemented product variants, inventory management, shopping carts, checkout, order processing, password recovery, and email functionality.
- Implemented automated PDF invoice generation and order management.
- Built responsive product browsing with search, categories, pagination, and product variants.
- Deployed the application using PostgreSQL, Railway, and Vercel.

Django News Application (Python)

- Developed a Django-based news platform for independent journalism and curated publications
- Supports role-based permissions, article and newsletter publishing, subscriptions and integrations with email and X(Twitter).
- Implemented user authentication, RESTful APIs for retrieval of data and Third-party X(Twitter) integration for sending out announcements of new articles.
- Utilized MongoDB for efficient data storage and management.
- Created professional software documentation using Sphinx.

React Beach House– Frontend Web Application (React, JavaScript, Vite)

- Independently designed and developed a responsive React website for a beach house rental property, using the project to apply and strengthen self-taught JavaScript and React skills.
- Built an interactive booking interface allowing users to select booking dates, specify the number of guests, and generate a pre-filled booking enquiry message.
- Implemented reusable React components, responsive layouts, smooth image interactions, scroll navigation, and custom toast notifications.
- Integrated React Router and modern UI/icon libraries including Radix UI, Lucide React, and React Icons.
- Deployed the application to Vercel as a live demonstration of independent frontend development.

- EDUCATION -

HyperionDev - Software Engineering Bootcamp (02/2025 - 08/2025)
Brooklyn City College - Electrical Engineering (Native) (2022 - 2023)
Barberton Highschool - Matriculated (2015 - 2020)

- TECHNICAL SKILLS -

- **Languages**: Python, JavaScript, SQL, HTML, CSS
- **Backend:** Django, Django REST Framework
- **Frontend:** React, Vite, Bootstrap
- **Databases:** PostgreSQL, SQLite, MongoDB
- **Tools:** Git, GitHub, Docker, Postman, Sphinx
- **Concepts:** REST APIs, Authentication, Role-Based Access Control, Responsive Web Development

- SOFT SKILLS -

- Collaboration, Problem Solving, Accountability, Communication, Analytical Skills, Adaptability
